

Template Week 5 – Operating Systems

Student number:

Assignment 5.1: Unix-like

- a) Find out what the difference is between UNIX and unix-like operating systems?

UNIX operating systems require more certifications/have trademarks and are also sometimes not as open source as unix-like operating systems

- b) Study the image above named UNIX timeline. Find out who Ken Thompson, Dennis Ritchie, Bill Joy, Richard Stallman, and Linus Torvalds are and what they have contributed to the development of UNIX or unix-like systems and to IT in general. **TIP!** English-language sources often contain more detailed information about these individuals.

Person	Contribution to UNIX and unix-like operating systems	General it impact
Ken Thompson	Co-created UNIX, Thompson shell	OS design, multiuser systems
Dennis Ritchie	Co-created UNIX, created C	Portable software, modern OS design
Bill Joy	BSD UNIX, vi editor, TCP/IP implementation	Networking, editors, BSD influence
Richard Stallman	GNU project, GCC, bash, GPL	Free software movement, FOSS foundation
Linus Torvalds	Linux kernel	Open-source OS, global computing impact

- c) What is the philosophy of the GNU movement?

The GNU philosophy emphasizes free software, meaning freedom not price. It promotes collaboration, sharing, and transparency in software development.

- d) Does Ubuntu as a Linux operating system conform to the philosophy of the GNU movement? Please explain your answer.

Ubuntu mostly conforms to the GNU philosophy but not 100%, because of the inclusion of some proprietary components.

Strict GNU advocates might prefer GNU/Linux distributions like Trisquel or Parabola, which avoid proprietary software entirely.

- e) Find out what is the Windows Subsystem for Linux?

WSL is a compatibility layer in Windows that allows users to run Linux distributions natively on Windows without using a virtual machine.

- f) Find out, which operating system family belongs to Android, iOS and ChromeOS?

Android: Linux

Ios: UNIX

ChromeOs: Linux

Assignment 5.2: Supercomputers and gameconsoles

- a) Research on this site what supercomputers are used for and write a short summary of it:
<https://www.computerhistory.org/timeline/search/?q=Supercomputer>

Supercomputers handle problems that regular computers cannot process efficiently, using huge amounts of processing power for simulations, predictions, and complex calculations.

- b) IBM is a company that has already built a number of supercomputers. One of them is IBM's Roadrunner. The CPU developed for this supercomputer was further developed at a later stage as the CPU for the PlayStation 3 console. Find out what a **PlayStation 3 cluster** is and what it was used for?

A group of multiple PS3 consoles connected to act as a parallel computing system.

Used for research purposes, like AI experiments at universities.

- c) You can build a supercomputer by putting a few computers together in a cluster. Here's what Oracle did with a collection of Raspberry Pi's, for example:

<https://blogs.oracle.com/developers/post/building-the-worlds-largest-raspberry-pi-cluster>

What specific operating system is running on this cluster?

Oracle Linux for ARM

- d) Does Oracle's Raspberry Pi supercomputer appear in the list of the 500 fastest supercomputers in the world? Make a logical decision for this, without going through the entire list.

<https://www.top500.org/lists/top500/list/2023/06/>

Even with 1,050 Raspberry Pis, their individual CPU power is tiny compared to real supercomputers using Xeon or AMD EPYC processors.

therefore Oracle's Raspberry Pi cluster would not appear on the Top500 list, because its performance is far below modern high-performance supercomputers.

- e) What CPU architecture is used for the PlayStation 5 and Xbox Series X?

AMD Zen 2 (x86-64)

What operating systems run on these consoles?

PS5: Custom PS5 OS

Xbox Series X: Custom Xbox OS

What conclusion can you draw from the answer to the previous question?

Modern gaming consoles use **desktop-class x86-64 CPUs** instead of specialized supercomputer CPUs.

They run **custom OSes** optimized for gaming, showing that **high-performance computation principles** can be adapted for consumer hardware.

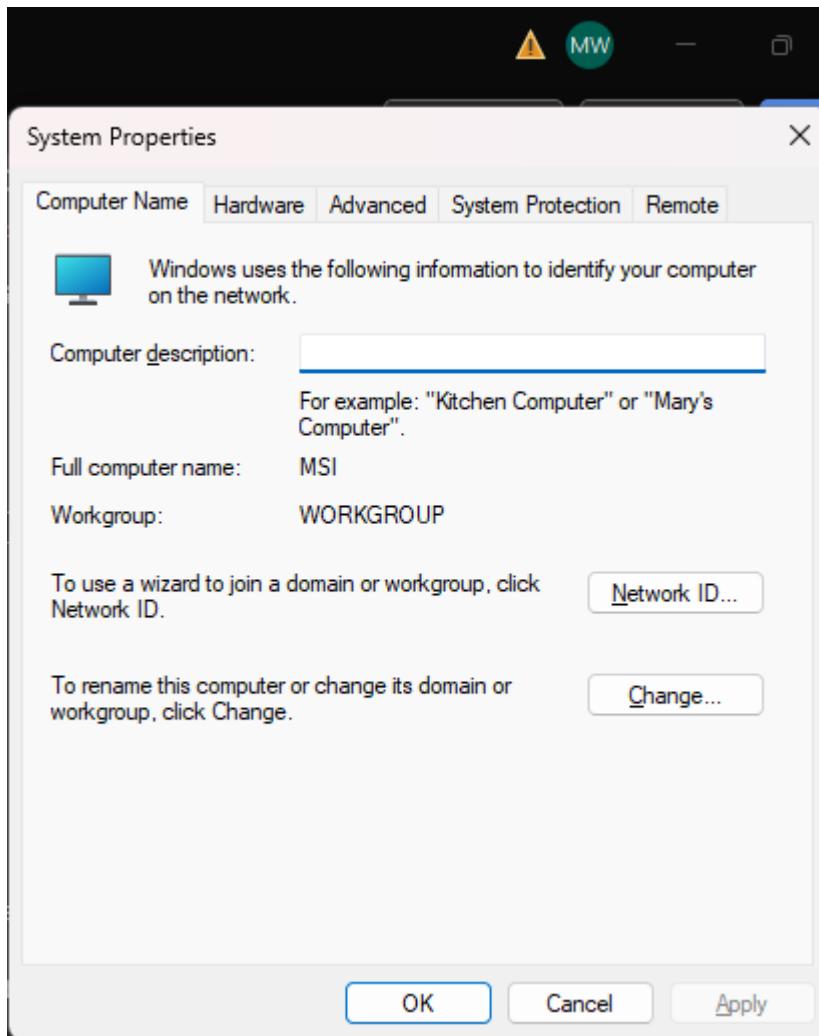

Assignment 5.3: Working with Windows

Take relevant screenshots of the assignments below

- a) Practice for about 10 minutes with the **Windows** keyboard shortcuts combinations, skip the general shortcuts in this exercise. Take a look at which screens are opened.
- b) The file explorer can be opened with **Windows** + E, Which key combination could you also use?

Windows + x and then click e

- c) Open the system properties with a **Windows** key combination, take a screenshot of the open screen. Paste this screenshot into this template.

- d) Open task manager with a key combination. Take screenshots of the tabs: processes (shows active processes), performance, and users. Place these three screenshots in this template.

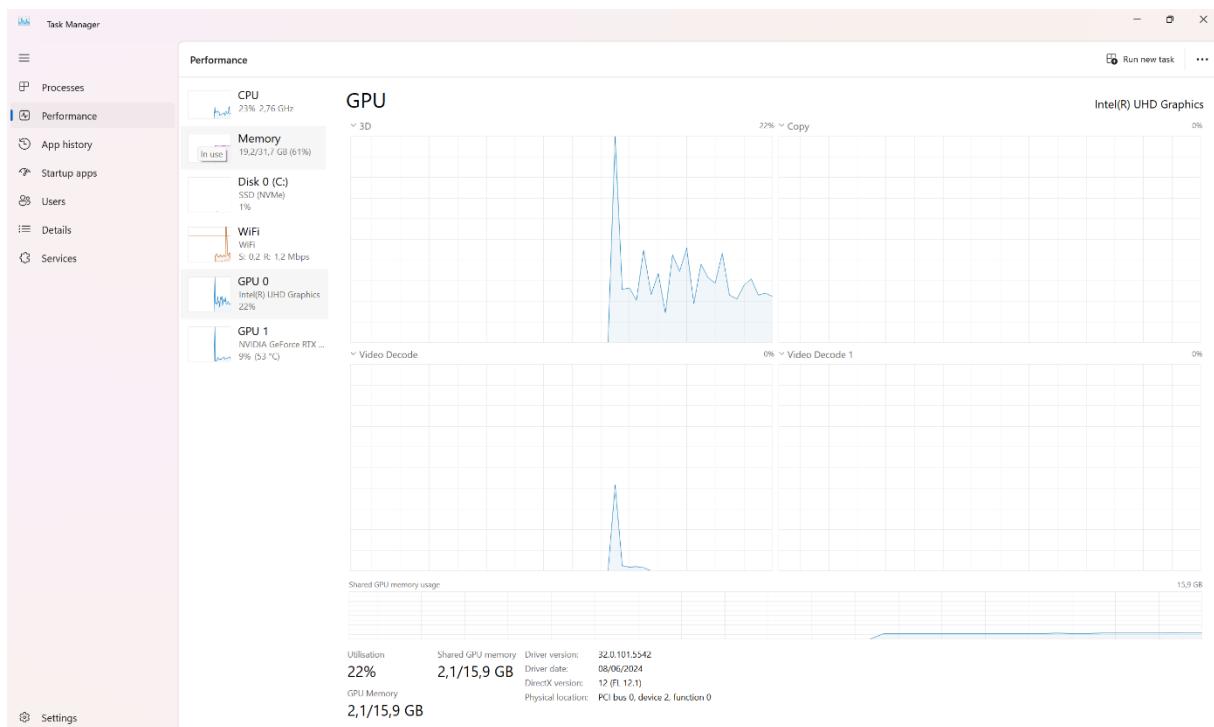

Task Manager

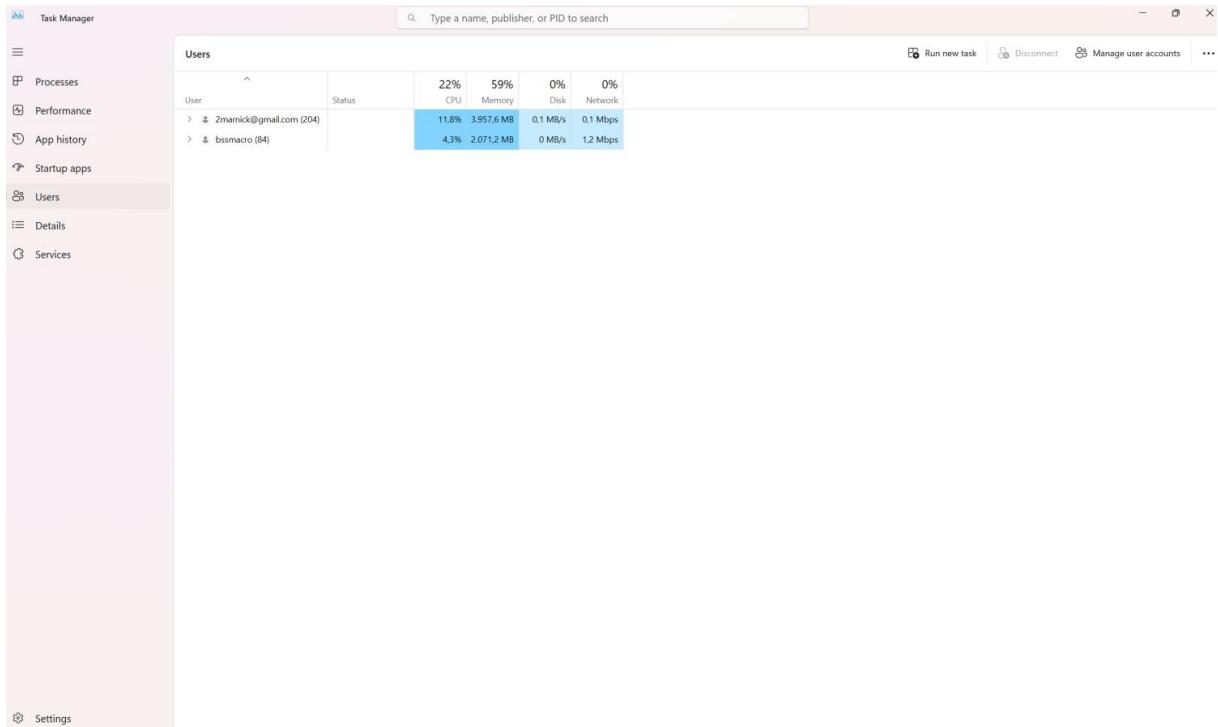

Type a name, publisher, or PID to search

Run new task End task Efficiency mode

Processes

Name	Status	22% CPU	58% Memory	0% Disk	0% Network
RubloxPlayerBeta		0%	1,516.3 MB	0 MB/s	0 Mbps

(screenshots komen qua specs niet overeen met week 3 omdat het een andere laptop is waar ik de screenshots heb gemaakt)

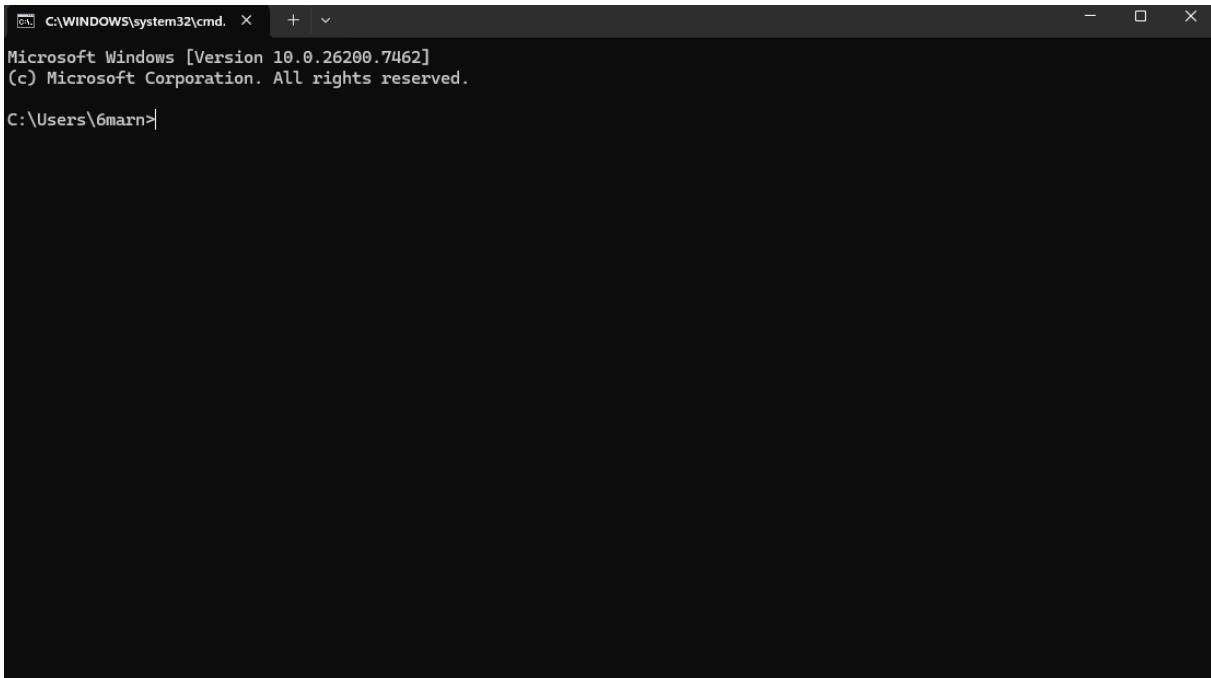

- e) If you're giving a PowerPoint presentation and you connect your laptop to a projector, Windows can use the projector as a second screen. For example, you may have Outlook open on your first screen that you don't show over the projector, while the PowerPoint presentation is displayed on the projector, or the second screen. Which key combination should you use for this?

Windows P

- f) If you leave the classroom for a while and you leave your laptop behind, it is wise to lock the screen. Your Apps will continue to run in the background. So, for example, if you're waiting for a download that takes a while, lock the screen and get a cup of coffee. Which key combination do you use for this?

Windows L

- g) Open the Run screen with a key combination. On this screen, type CMD and press <enter>. Take a screenshot of this result and paste it into this template.

ubuntu@ubuntu2404:~/Documents$
```

Lines 490 and 1124 have the word kingdom

```

ubuntu@ubuntu2404:~/Documents$ grep -n -C 10 "kingdom" SherlockHolmes.txt
480-“Then I shall drop you a line to let you know how we progress.”
481-
482-“Pray do so. I shall be all anxiety.”
483-
484-“Then, as to money?”
485-
486-“You have carte blanche.”
487-
488-“Absolutely?”
489-
490:“I tell you that I would give one of the provinces of my kingdom to
491-have that photograph.”
492-
493-“And for present expenses?”
494-
495-The King took a heavy chamois leather bag from under his cloak and laid
496-it on the table.
497-
498-“There are three hundred pounds in gold and seven hundred in notes,” he
499-said.
500-
```

```

1114-
1115-The King stared at him in amazement.
1116-
1117-“Irene’s photograph!” he cried. “Certainly, if you wish it.” 
1118-
1119-“I thank your Majesty. Then there is no more to be done in the matter.
1120-I have the honour to wish you a very good morning.” He bowed, and,
1121-turning away without observing the hand which the King had stretched
1122-out to him, he set off in my company for his chambers.
1123-
1124:And that was how a great scandal threatened to affect the kingdom of
1125-Bohemia, and how the best plans of Mr. Sherlock Holmes were beaten by a
1126-woman’s wit. He used to make merry over the cleverness of women, but I
1127-have not heard him do it of late. And when he speaks of Irene Adler, or
1128-when he refers to her photograph, it is always under the honourable
1129-title of _the_ woman.
1130-
1131-
1132-
1133-
1134-II. THE RED-HEADED LEAGUE
